Sometimes, the motherboard identification label can be found on the side of the motherboard.The effect of nanosilver on growth, development, and antioxidant capacity of developing gill cells in zebrafish (Danio rerio). Silver nanoparticles (AgNPs) are mostly applied as antimicrobial agents and their application as biocides in other industry, agriculture, and environment is growing. However, little is known about AgNPs effects on zebrafish (Danio rerio). This study evaluated the effect of AgNPs on the development and the antioxidant capacity of developing gill cells. Zebrafish were treated with four concentrations of AgNPs (0.1, 0.3, 1, and 3 µg/mL) from 4 to 24-h post fertilization. AgNPs concentrations above 0.1 µg/mL affected the development of zebrafish in a concentration-dependent manner. At 24 h post fertilization, AgNPs at the concentration of 3 µg/mL significantly decreased the body length (P = 0.031) and the body weight (P = 0.048). AgNPs significantly affected the size of gill arches, Hsp70, and catalase activity of the gills at all Ag

I would like to be using shapely library with python. Is there any? A: I have written a python wrapper for the Shapely Point in Polygon algorithm. You can see it at [github.com/knb/point\\_in\\_polygon](https://github.com/knb/point_in_polygon). I am also trying to find a way of splitting and recombining the points that I have on the overlay shape into the original shape. This could be relevant to your question. Please feel free to ask me any questions. A: Shapely offers an algorithm to do this (see [Point\\_in\\_polygon](https://github.com/shapely/shapely/blob/master/shapely/geometry/PointInPolygon.py)). A: You can use it here You can also use GeoPandas with the [shapely.geometry.PointInPolygon](https://github.com/shapely/shapely/blob/master/shapely/geometry/PointInPolygon.py) method Q: Add Push Notification Service to Android App I am new to android development. I want to create a push notification service application to send notifications to users subscribed to my site. I want to use GCM. Can anybody give me some insights on it? A: Follow this link for a tutorial, I think this is the best tutorial to start with. You can create a Service which will work independently and will notify you by using the Parse Library. Follow this tutorial to understand how it works. The gene encoding Staphylococcus aureus alpha-toxin is located in the narrow-molecule-size plasmid pE.
