How to get direct access to your Minecraft data. Let's say you just made a world from the default world generator, and if you look at it, it's not really a large world and you want to give it to someone to play with. Remember: The world exists in the real world and can still be used by anyone. This is basically where you'll be able to login and see all of your creations. There are two main methods of exporting data from Minecraft, and they are:. The default option for exporting your world is to directly save to the server, which is useful if you wish to export in bulk. If you're concerned about your data being stored on a server that's easily accessible, then you may want to try export via the Minecraft Bedrock Edition API instead. Download most mods and Creative Cloud tools directly from Minecraft servers. Here's where your custom world data is stored. However, we still recommend you backup your data when you save to the server — using the Google Chrome Save Page command for a specific file extension, for example. You can also use the most recent Minecraft version to back up the latest world data. Lastly, while it's unlikely, you can always make a custom world backup to a USB drive or network drive. Make a backup and remember to keep the files safe. The links below will direct you to the relevant files. Should you wish to make a backup of your data, please keep in mind that the

data is stored on a server which will probably be accessible by anyone. Save your world using the default server, and you'll have access to it in the same way that you do now. Replace the contents of the backup folder with the contents of the backup folder from the downloaded file. Save the world using the Save World command, and you should have access to the new world. Please do not modify the world data unless you're familiar with doing so. If you do, you can find out more about the state of the world by logging into the Minecraft server. Your data backup is ready to go. Now you can safely give it to the person in question. How to load data from a server. Before you proceed, you should make sure that your world backup is backed up to a safe location. To ensure that you have a backup file of your data, please do the following: Use the Save World command to save the world to the server. We strongly recommend that you use a 82157476af
